

ProjectCard Specification

Description

The ProjectCard component will display all the heading information about the project (Title, description, image). It will also provide action buttons which the user can use to navigate to the project or the project board.

Usage

The ProjectCard component is intended to be used exclusively as a child of the ProjectsContainer component. To use this component, map over each of the projects in the ProjectContainer component and pass the corresponding project information into the ProjectCard component.

Subcomponents

The ProjectCard component has no major subcomponents

Required State

The ProjectCard component does not require any state

Required Props

- project: A Project object which the card will display information about.
