

CreateProjectDialog Specification

Description

The CreateProjectDialog component will provide users with an interface where they can enter information about a project they want to create. This information is then taken and sent to the api to create the project for the user.

Usage

To use the CreateProjectDialog component the developer must trigger its launch when the “Create Project” item is clicked from the “Create Dropdown” or from the “Create Project” button on the dashboard UI

Subcomponents

- Title input field
 - Appears at the very top of the component.
 - Is required in order to create a project.
- Description input field
 - Appears right below the Title input field.
 - Is optional in order to create a project.
- Additional Users Field
 - Appears closer to the bottom of the component.
 - Is optional to add any additional users.
 - The user should be able to distinguish between users who already have a trello. account and those who do not.
- Finish Button
 - Appears at the very bottom of the component.
 - When clicked the user will be brought to a confirmation page.
