

Loading Specification

Description

The Loading component will provide a moving ui while the user waits for page loads

Usage

To use the Loading component embed it wherever there could be a potential page load, note sending an api request from an already loaded page should not render the Loading page. Instead, a simple modal Spinner will be used

Subcomponents

- LoadingSpinner
 - Appears in the center of the page, does a spinning animation

Required State

The Loading component does not require any state

Required Props

The Loading component does not require any props
