

CreateDropdown Specification

Description

The CreateDropdown provides a dropdown interface where the user can create Tasks, Projects, or Teams.

Usage

To use the CreateDropdown component, create a Dropdown component in an appropriate place in the UI. That Dropdown component is going to need a modalName prop, set this to ModalNames.CREATE_DROPDOWN. To launch the dropdown, dispatch the openModal action with ModalNames.CREATE_DROPDOWN specified as the first parameter, and all the details about the dropdown in the second parameter.

Subcomponents

- Create Task Menu Item
 - When clicked, displays the CreateTaskDialog (yet to be implemented)
 - When clicked, closed the CreateDropdown
- Create Project Menu Item
 - When clicked, displays the CreateProjectDialog
 - When clicked, closed the CreateDropdown
- Create Organization Menu Item
 - When clicked, displays the CreateOrganizationDialog (yet to be implemented)
 - When clicked, closed the CreateDropdown

Required State

The CreateDropdown component does not require any state

Required Props

The CreateDropdown component does not require any props
