

ProjectsContainer Specification

Description

The ProjectsContainer component will display a ProjectCard component for each of the user's projects

Usage

To use the ProjectsContainer component simply embed it within the Dashboard component, it can be used other places as well but currently this is the place where it will be used

Subcomponents

- ProjectCard
 - A simple card component which will display information about a project
 - There will be one of these for each project which the user belongs to

Required State

The ProjectsContainer component takes advantage of the project's reducer in the redux store.

Required Props

The ProjectsContainer component does not require any props.
