

UserDropdown Specification

Description

The UserDropdown provides a dropdown interface where the user can see their header information (name, email, image) and they can access their settings and logout.

Usage

To use the UserDropdown component, create a Dropdown component in an appropriate place in the UI. That Dropdown component is going to need a modalName prop, set this to ModalNames.USER_DROPDOWN. To launch the dropdown, dispatch the openModal action with ModalNames.USER_DROPDOWN specified as the first parameter, and all the details about the dropdown in the second parameter.

Subcomponents

- Heading
 - Displays the users name, image and email address
- Settings Button
 - When clicked, the user will be take to their settings
- Logout Button
 - When clicked, the user will be logged out of the application

Required State

The UserDropdown component takes advantage of the user reducer in the redux store

Required Props

The UserDropdown component does not require any props
